

HUMANITARIAN ENGINEERING LECTURE SERIES SPRING 2013 PRESENTS

**WEDNESDAY-
MARCH 6,
2013**

**HILL HALL
202 4 - 5 PM**

To Be or Not to Be a Humanitarian Engineer:
An Engineer's Career Pathway between the
Profit and Non-Profit Worlds

By Leslie Light (iDE)*

As an engineer, what does it actually mean to "have a humanitarian career?" Do you have to be part of a non-profit to have one, or can you have one while working for profit? As engineers, why do we experience a pull to "make a difference," and how can we be sure that the difference we make is actually beneficial to our world?

**Light refreshments
available**

*Leslie Light, B.S. in Product Design Engineering from Stanford, is now a project manager at locally-based non-profit iDE. She will talk about her varied career: what experiences have brought her closer to or further from that perfect job, what other incarnations of humanitarian careers she's seen along the way, and a few things - good and bad - she's learned about "making a difference."
