

TRANSFORMING LIVES
The Campaign for Colorado School of Mines

The Shultz Family Leadership in Humanitarian Engineering Speaker Series & WE²ST present:

Are you ready to challenge your education? Reconciling budgets, politics, communities and the environment in the oil and gas industry

By Steve Crowell - CEO & President of Pluspetrol Resources Corporation

**Wednesday February 4th, 2015 4 - 5 pm
at Student Center Ballroom C**

Education is the necessary base for a solid development and professional growth. All the knowledge that we acquire in our university and post-university stages allows us to face the future with confidence.

But reality challenges us from the first moment in which we begin to work. Immediately we are conscious of the inconsistencies that exist between what we learned in the classrooms and the real world.

For the highly skilled professionals of Pluspetrol, with more than 20 years of experience in operations with high pressure gas fields and complex logistics, Camisea represented the biggest challenge the company had faced. In a time frame of 44 months they had to develop and put in production the largest gas field in Latin America and one of the most important in the world.

Confronted with extremely complex logistics and a highly sensitive community and environmental settings, Pluspetrol managed to fulfill the commitment assumed with the Government and the people of Peru. This was accomplished not only in record time, but also with establishing a standard that set a new international benchmark for the whole industry.
