

Special 20th Anniversary
Workshop Presented by
Humanitarian Engineering

Integrating Humanitarian Engineering into Your Classroom and Programs

Tuesday, September 12 | 3-5 PM | Dr. Juan Lucena
Green Center 220F | Refreshments served!

The goal of this workshop is to collaboratively develop strategies to advance the work that engineering educators do in the areas of community engagement, frugal engineering, humanitarian engineering, ethics, social entrepreneurship, and related areas to accentuate inherent issues of social justice and social responsibility. Based on their research and programmatic experience in these areas, workshop facilitators will outline multiple potential spaces for action. These spaces constitute the primary domains within the locus of control of most engineering educators. Whether we work in engineering design, the engineering sciences, or develop Humanities/Social Science (HSS) courses for engineers, this workshop will allow participants to assess which space(s) is (are) the most effective to initiate or continue reform in their own

Dr. Juan Lucena, Professor in Engineering, Design, and Society Department and Director of HE Undergraduate Program

Dr. Lucena teaches, researches and mentors students at the intersections of engineering, community development, and social justice. His career goal is to transform engineering education so students can serve communities historically underserved by engineering.

And don't miss the HE anniversary special lecture!

**Are we being reciprocal?! A systematic review
of reciprocity in Community-Based Learning**

Sep. 13 | 3 - 4 PM | Brown W210
